### 地盤平整評估

地盤平整工程的理念為盡量將擬議發展及基建貼近現有地形以減低地盤平整工程。研究已檢視地盤平整水平及斜坡工程，以盡量減少開挖量及盡量再利用現場挖掘物料。研究已就具發展潛力區所需的挖填量作初步估算。

### Site Formation Assessment

The main consideration of the site formation philosophy is to minimise the site formation works by keeping all the proposed development and infrastructure as close to the existing ground profile as possible. The site formation level and slope works were critically reviewed to minimise the excavated material generation and maximise the on-site reuse of the generated material. A preliminary estimation of the amount of excavation and filling works required the Stage 1 works is being carried out at the moment.
